Bulletin 7101-00E

Flexible inputs and flexible performance

DLM2054 2.5GS/s 500MHz MINTO SHOWAL OTCHLOSCOP

Signal observation on 4 channels or more...

Flexible MSO Input

- Capture a mixed signals of analog and logic signals -

Four channels is not sufficient to view the functioning of digital control circuits. The DLM2000 series converts 4 ch of analog input to 8-bit logic, and functions as a 3 ch analog + 8-bit logic MSO (mixed signal oscilloscope)

3 ch analog + 8-bit logic

The performance of up to 11 inputs by converting to logic

Using logic input, up to 11 input signals can be observed simultaneously as 3 ch of analog and 8-bit logic. It is not only possible to use logic input for observation of data and control signals, or as a trigger source, but also for logic input analysis of I²C and SPI serial busses.

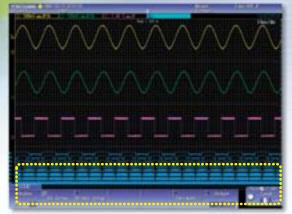

Logic probe for the DLM2000

DLM2000 Series Lineup

Item	DLM2022 710105	DLM2032 710115	DLM2052 710125	DLM2024 710110	DLM2034 710120	DLM2054 710130

· · · ·					* Or 3 channels who	n using logic input

Fast data processing with ScopeCORE

With our proprietary ScopeCORE fast data processing IC, real time display is possible even when simultaneously measuring multichannel signals of 11 inputs.

ScopeCORE fast data processing IC

Or 3 channels when using logic input

Sophisticated waveform acquisition engine

With long memory and the History function, you'll never miss an historical waveform. A variety of trigger functions reliably capture the waveforms you want.

Large capacity (125 Mpoint) memory enables long-duration measurements

For taking 2 ch measurements in Single mode, you can add the /M2 memory expansion option giving you up to 125 Mpoints of large memory capacity. 10,000 Hz signals can be recorded for up to 5,000 seconds. Even at a sampling rate of 1.25 GS/s, waveforms down to 0.1 seconds can be captured.

	Continuous Measurement	Single-Sho	ot Measurement
	2 ch, 4 ch same	With 4 ch (With 2ch for DLM20x2)	With 2 ch (With 1ch for DLM20x2)
Standard	1.25 Mpoints	6.25 Mpoints	12.5 Mpoints
/M1, /M1S memory option	6.25 Mpoints	25 Mpoints	62.5 Mpoints
/M2 memory option	12.5 Mpoints	62.5 Mpoints	125 Mpoints

Note)The /M1, /M2 memory expansion options are only available on 4ch models. The /M1S option is only available on 2ch models.

> You can replay waveforms later on, so you'll never miss an abnormal waveform HISTORY

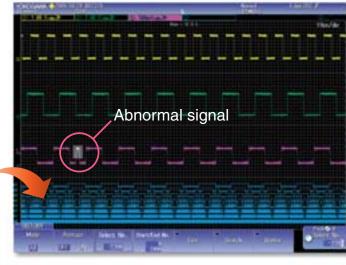

- History Function - \sim

With the DLM2000 series, up to 20,000 previously captured waveforms can be saved in the acquisition memory. With the History function, you can display just one or all of the previously captured waveforms (history waveforms) on screen. You can also perform cursor measurement, computation, and other operations on history waveforms. Using the History function, you can analyze rarely-occurring abnormal signals.

History search function

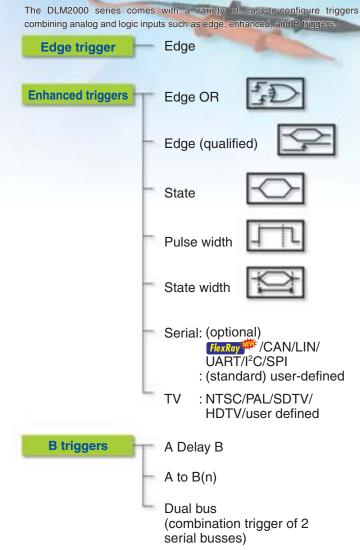

You can search the up to 20,000 previously captured waveforms for history waveforms that meet certain conditions. You can perform cursor measurement and other analyses on the found waveforms.

Replay function

Waveforms can be displayed in order, one at a time, by using the rotary knob. With the Replay function, history waveforms can be automatically played back, paused, fast-forwarded, and rewound.

C Trigger Function capturing combined analog/digital complex waveforms

Trigger function example

VORDGAME . SHINE LINELD

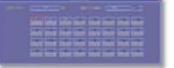

◆ A to B(n) trigger:

Example: Trigger on the 7th edge of signal on B. This is effective for measurements with shifted timing. such as non-standard video signal vertical/horizontal periods or motor reference position pulses and drive pulses.

Input signal A				
input oighti /	1 2	3 (4	<u>6</u> (1)	
Input signal B			пт	LL
			T Tr	igger

Serial pattern trigger (user defined): Example : Trigger on an arbitrarily set pattern of up to 128 bits. This is effective for detecting ID/Data and other portions of proprietary communication formats.

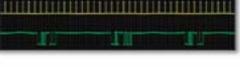

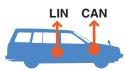

• Dual pulse trigger:

Example: Trigger on a combination of CAN and LIN bus triggers. I2C + SPI bus triggers, and other combinations are possible.

Trigger when either LIN or CAN bus signal conditions become true

Input signal A CAN Input signal B LIN

C Real time filter with optimum noise reduction supports a wide range of frequencies (from 8 kHz to 200 MHz)

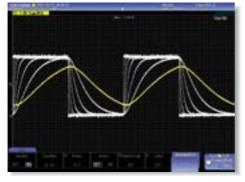

The DLM2000 series has two types of filters, one processed at the input circuit and one based on MATH functions. These filters are effective for rejecting unwanted signals, allowing observation of only the desired bandwidths.

or high pass filters.

Real time filters

Each channel has 14 low pass filters available from 8 kHz to 200 MHz. Waveforms of limited bandwidths are stored in internal memory.

Cutoff frequencies : 200 MHz, 100 MHz, 20 MHz, 10 MHz, 5 MHz, 2 MHz, 1 MHz, 500 kHz, 250 kHz, 125 kHz, 62.5 kHz, 32 kHz, 16 kHz, and 8 kHz

Processing with built-in filters

Zooms into two different points — Waveform zoom and search functions —

Zoom two locations simultaneously

Because the DLM2000 series lets you set zoom factors independently, you can display two zoomed waveforms with different time axis scales at the same time. Also, using the Auto Scroll function, you can automatically scroll waveforms captured in long memory and change the zoomed location. With Auto Scroll you can choose forward, backward, fast-forward, scroll speed, and other control options.

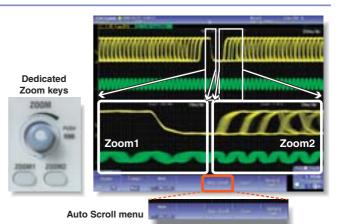

Computed digital filters

The input waveform can be filtered using an IIR filter, which is a

Cutoff frequency setting range : 0.01 Hz to 500 MHz

MATH function. Filtered waveforms can be displayed at the same time as the input waveform for comparison. You can select low pass

Filtering of a PWM waveform using computation

Large capacity memory gives you a variety of waveform search functions.

Two types of waveform searching:

Normally, searching for data takes time and costs money, and long memory is useless without functions for extracting desired data from a large capacity memory. That's why the DLM2000 series does not simply offer long memory, it also provides powerful waveform search functions.

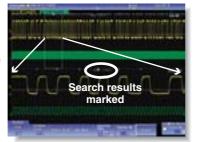

Searching for data in a single screen: the Zoom Search function

This function searches captured waveforms in the long memory and displays waveforms that meet the search criteria in the zoom area. The locations of the found waveforms are marked on screen (\checkmark shows the current location).

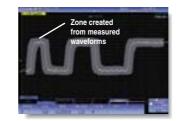

Searching for history waveforms: the History Search function

Criteria can be specified for extracting desired waveforms from up to 20,000 previously captured waveforms.

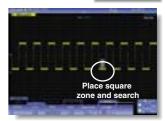

• Waveform search criteria Edge, edge (with conditions), state pattern, pulse width, state width, serial bus (only on models with the serial bus analysis option)

Waveform search using edge criterion

Searching for waveforms in zones created by moving measured waveforms up/down/left/right.

Criterion extraction

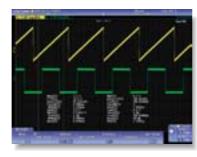

Search for waveforms that pass through/do not pass through a rectangular zone placed on screen.

Useful Functions Fastest and most capable analysis

DLM 2000 Series

Displays trends of peak-to-peak or pulse width per cycle Measure function and statistics —

Twenty-eight waveform parameters are included such as: maximum. minimum, peak-to-peak, pulse width, period, frequency, rise/fall time, and duty ratio. Automated measurement can be performed using up to 20 of these waveform parameters. Also. waveform parameters can be measured

repeatedly, and the statistical values displayed (mean, maximum, minimum, standard deviation, etc.).

Measures voltage/time differences automatically – Cursor Measurement —

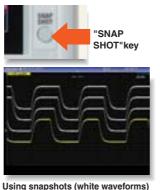

Cursors can be placed on the displayed waveform from signal data. and various measurement values at the intersection of the cursor and waveform can be displayed. There are six types of cursor; ΔT , ΔV , ΔT & ΔV , Marker, Degree Cursor.

Simultaneous level and time difference measurement with the $\Delta T \& \Delta V$ cursor

Keeps waveforms with one push — Snapshot —

By pressing the SNAPSHOT key to the lower right of the screen, you can freeze a white trace of the currently displayed waveform on the screen. You can press the key repeatedly and conveniently leave traces for comparing multiple waveforms. Also, snapshot data recorded on screen can be saved or loaded as files. and can be recalled for use as reference waveforms when making comparisons.

Has a GO/NO-GO function Abnormal waveform detected - Action on trigger -

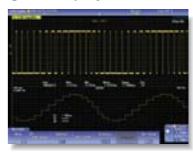

GO/NO-GO can be determined using trigger conditions, zone waveforms, measurement parameters, and other criteria. For NO-GO, actions can be carried out at the same time such as sounding a buzzer, saving the current waveform, or sending notification to a designated e-mail address. Waveforms in which an abnormality occurred can be saved for confirmation and analysis of the phenomena at a later time.

 \odot

— Trend and histogram displays —

Waveform parameters such as period, pulse width, and amplitude can be measured repeatedly and displayed in graphs. In a single screen you can observe period-byperiod fluctuations, compute amplitudes every screen using multiple waveforms. and display amplitudes as trends. You can also display histograms

Trend display of waveform parameters Histogram display using the time axis

referencing the voltage or time axis using values from repeated automated measurement of waveform parameters.

Analyzes frequency spectrums – FFT analysis —

Up to 2 FFT analyses can be performed simultaneously. FFT can be performed on computed waveforms in addition to the actual waveforms on CH1 to CH4. Analysis can be performaed of the frequency components of waveforms filtered for limited bandwidth, of frequency for changes in

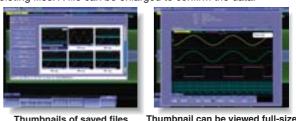

period of rotary objects, and other phenomena.

FFT analysis

Displays stored files in thumbnail format — Thumbnails of saved files —

Thumbnails of waveform data, waveform image data, and Wave-Zone files can be displayed. The image and file names are shown so that you can view screen image contents while copying or deleting files. A file can be enlarged to confirm the data.

Can check functions with graphical online help — Graphical online help —

You can view detailed graphical explanations of the oscilloscope's functions by pressing the "?" key in the lower left of the screen. This lets you get help on functions and operations on screen without having to consult the user's manual.

Solutions of the DLM2000 Analysis Applications

Serial analysis function options (/F1, /F2, /F3, /F4, /F5, /F6) - FlexRav //UART/CAN/LIN/I²C/SPI-

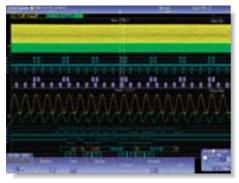

Triggers for FlexRay, UART, CAN, LIN, I²C, and SPI bus signals are supported along with decode display analysis (serial bus analysis option only on 4 ch models) Logic input can also be used for serial buses (excluding FlexRay, CAN and LIN).

	I ² C	SPI	UART	LIN	CAN	FlexRay
Analog input	Yes	Yes	Yes	Yes	Yes	Yes
Logic input	Yes	Yes	Yes	NA	NA	NA

DLM 2000 Series

Simultaneous analyses of different busses: Two busses can be analyzed simultaneously. Waveforms and analysis results from busses with different speeds can be displayed in individual Zoom screens with different scales.

A wealth of trigger functions: A wide variety of trigger conditions can be set, such as ID/Data trigger combinations and combinations of serial bus triggers with normal edge triggers.

Simultaneous analyses of I²C and SPI

Accessories

PBDH1000 differential probe (model 701924) 1.0 GHz bandwidth 1 MΩ, approximately 1.1 pF Maximum differential input voltage range: ± 25 V

Differential probe (model 701920) DC to 500 MHz bandwidth 100 kΩ, approximately 2.5 pF Maximum differential input voltage range: ±12V

Simultaneous analysis of FlexRay and CAN

Power supply analysis option (/G4)

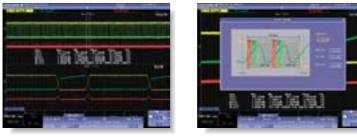

Dedicated power supply analysis options are available (4 ch models only) for switching loss, joule integral (i2t), SOA (safe operating area) analysis, harmonic analysis of power supply current based on EN61000-3-2, and other operations.

Switching loss analysis

Voltage and current waveforms can be input to the 62.5 MW (max.) long memory (/M2 models) for computation of switching loss (V(t) X i(t)). A wide variety of switching loss analyses are supported, including turnon/off loss calculation, loss including continuity loss, and loss over long cycles (50 Hz/60 Hz).

Harmonic analysis of power supply current based on EN61000-3-2

Harmonics determined by the IEC standard that are generated by the target device can be judged for each applicable class (classes A-D). Bar graphs and lists can be displayed for comparing harmonic current limit values with values calculated from actually measured signals.

Connectivity & Software

Software

Xviewer (701992, sold separately)

Xviewer is software for use on a PC. It can be used for display, analysis, and conversion to ASCII of binary waveform data using waveforms captured by the DLM2000 series. By adding the MATH option, you can enter user expressions for performing waveform computations. FFT of up to 2 Mwords can be performed.

For details on accessory software, visit https://y-link.yokogawa.com/YL000.po Also, you can download free software and trial versions of retail software from this site.

*1 Measured under standard operating conditions after a 30-minute warm-up followed by calibration. Standard operating conditions: Ambient temperature: 23°C ±5°C Ambient humidity: 55 ±10% RH Error in supply voltage and frequency: Within 1% of rating 2 Value in the case of repetitive phenomenon. The frequency bandwidth of a single-shot phenomenon is the smaller of the two values, DC to sampling frequency2.5 or the frequency bandwidth of the repetitive phenomenon. *3. When the input section is shorted, the acquisition mode is set to Normal, accumulation is OFF, and the probe attenuation is set to 1:1. *4. Acquisition rate does not vary with an increase or decrease in channels.

External Dimensions

Unit: mm

DLM 2000 Series

Model	Suffix code	Description
10105	Cullix Couc	Digital Oscilloscope DLM2022 2ch, 200MHz
710110		Mixed Signal Oscilloscope DLM2024 4ch, 200MHz
710115		Digital Oscilloscope DLM2032 2ch, 350MHz
710120 ¹		Mixed Signal Oscilloscope DLM2034 4ch, 350MHz
710125		Digital Oscilloscope DLM2052 2ch, 500MHz
710130 ¹¹		Mixed Signal Oscilloscope DLM2054 4ch, 500MHz
Power cable	-D	UL/CSA standard
	-F	VDE standard
	-Q	BS standard
	-B	AS standard
	-H	GB standard
anguage	-HE	English Menu and Panel
Languago	-HC	Chinese Menu and Panel
	-HK	Korean Menu and Panel
	-HG	German Menu and Panel
	-HF	French Menu and Panel
	-HL	Italian Menu and Panel
	-HS	Spanish Menu and Panel
Option	/LN	No switchable logic input (4 ch model only)
option	/B5	Built-in printer
	1	"Memory expansion option (4 ch model only)
	/M1 ^{°2}	During continuous measurement: 6.25 Mpoints; Single mode:
	/////	25 Mpoints (when interleave mode ON: 62.5 Mpoints)"
		"Memory expansion option (4 ch model only)
	/M2 ^{*2}	
	/////2	During continuous measurement: 12.5 Mpoints; Single mode:
		62.5 Mpoints (when interleave mode ON: 125 Mpoints)"
	0.440	"Memory expansion option (2 ch model only)
	/M1S	During continuous measurement: 6.25 Mpoints; Single mode:
	/P2 ^{*3}	25 Mpoints (when interleave mode ON: 62.5 Mpoints)"
	/P2 /P4 ^{*3}	Probe power for 2 ch models
	/P4 /C1 ^{*4}	Probe power for 4 ch models GP-IB Interface
	7.4.1	
	/C10 ^{*4}	Ethernet Interface
	/C11 ^{*4}	GP-IB + Ethernet Interface
	/C8	Internal storage (1.8 GB)
	/G2*5	User defined math (4 ch model only)
	/G4 ^{°5}	"Power supply analysis function (includes /G2) (4 ch model only)
	/F1 ^{*6}	UART trigger and analysis (4 ch model only)
	/F2 ^{°6}	I ² C + SPI trigger and analysis (4 ch model only)
	/F3 ^{*6}	UART + I ² C + SPI trigger and analysis (4 ch model only)
	/F4 ^{*7}	CAN + LIN trigger and analysis (4 ch model only)
	/F5 ^{*7}	FlexRay trigger and analysis (4 ch model only)
	/F6 ^{'7}	FlexRay+CAN+LIN trigger and analysis (4 ch model only)
*2: Only one of th *3: Specify this op	ese may be select	urrent probes or other differential probes such as models 701920 or 701922.

	Part Name		Quantity	
Power cord (with 3-prong to 2-prong adapter)		er)	1	
"Passive probe, model 701 For models 710105, 71011	938 (200 MHz, 1		Per number of channels	
"Passive probe, model 701939 (500 MHz, 1.3 m) For models 710115, 710120, 710125, 710130"			Per number of channels	
Protective front cover			1	
Soft carrying case for probes			1	
Printer roll paper (for /B5 option)			1 roll	
User's manuals			1 set	
Accessory Models				
Name	Model	Specific	ation	
Logic probe (PBL100)	701988	1 MΩ input resistance, toggle	frequency of 100 MHz	
Logic probe (PBL250)	701989	100 kΩ input resistance, toggle frequency of 250 MHz		
Passive probe	701938	10 MΩ (10:1), 200 MHz, 1.5 m		
Passive probe	701939	10 MΩ (10:1), 500 MHz, 1.3 m		
FET Pprobe	700939	DC to 900 MHz bandwidth/2.5MΩ/1.8pF		
Active probe (PBA1000)	701912	DC to 1 GHz bandwidth/100kΩ/0.9pF		
100:1 voltage probe	701944	DC to 400 MHz, 1.2 m, 1000 Vrms		
100:1 voltage probe	701945	DC to 250 MHz, 3 m, 1000 Vrms		
Differential probe	701921	DC to 100 MHz bandwidth/max. ±700 V		
Differential probe	701922	DC to 200 MHz bandwidth/max. ±20 V		
Differential probe (PBDH1000)	701924	DC to 1 GHz bandwidth/1MΩ/max. ±25 V		
Differential probe	701926	DC to 50 MHz bandwidth, 5000 Vrms/7000 Vpeak		
Differential probe	700924	DC to 100 MHz bandwidth/max. ±1400 V		
Differential probe	700925	DC to 15 MHz bandwidth/max. ±500 V		
Differential probe	701920	DC to 500 MHz bandwidth/max. ±12 V		
Current probe (PBC050)	701929	DC to 50 MHz bandwidth, 30 Arms		
Current probe (PBC100)	701928	DC to 100 MHz bandwidth, 30 Arms		
Current probe	701930	DC to 10 MHz bandwidth, 150 Arms		
Current probe	701931	DC to 2 MHz bandwidth, 500 Arms		
Deskew correction signal source	701936	For deskew correction		
Mini clip converter	700971	For models 701938 and 701939		
BNC adapter	700972	For models 701938 and 701939		
PCB adapter	366945	For models 701938 and 701939, 10 per set		
Solder-in adapter	366946	For models 701938 and 701939, 1 adapter, red/black cables (3 ea.)		
Printer roll paper	B9988AE	Lot size is 10 rolls, 10 meters	each	
Xviewer	701992-SP01	For DL/WE series, standard version		
	701992-GP01	For DL/WE series, with MATH functions		
Probe stand	701919	Round base, 1 arm		
Carrying case	701964	Also for DL1600/DL1700E se	ries	
	11	DIMOOO
